PERSONAL PROJECTS

Real-time Chat App - Python, Django, PostgreSQL, Redis, Cloudinary, Bootstrap and JavaScript.

January 2024 – June 2026

- Built a real-time chat application that incorporates several features similar to WhatsApp, including statuses, notifications, and contact management.
- Implemented full CRUD (Create, Read, Update, Delete) operations, allowing users to manage their messages and contacts effectively.
- Refactored inefficient query pattern in contacts' statuses retrieval, reducing query volume in typical usage.
- Added WebSocket confirmation before notifying users to ensure their actions were successful.

SignSpeak – Python.

January 2025 – July 2026

- Built a sign language translator model maker and runner using TensorFlow and MediaPipe.
- Integrated a data pipeline to convert raw data into training datasets, enabling custom model training.
- Reworked the project's text correction feature (LanguageTool), migrating it from public API calls to a local server for more reliable corrections.
- Implemented the context manager in the translator so it shuts down the LanguageTool server when done.
- Reduced the first correction's time by adding a warm-up call on the translator initialization.

EDUCATION

Antonio José Camacho University Institution, Cali, CO | June 2028

Information Systems Technologist

SKILLS & TECHNOLOGIES

Python, JavaScript, Django, HTMX, HTML, CSS, Bootstrap, PostgreSQL, Git, GitHub

Languages: Spanish (native), English (B1)
